## **General Information**

The Southern Texel Breeders' Flock Ram Fair gives farmers the opportunity to purchase top quality Texel rams in natural condition for use as terminal sires or to generate hardy, high performance cross-bred dams for lamb production.

All rams offered at this sale have been bred in flocks registered with the New Zealand Texel Society ([www.nzsheep.co.nz/texel](http://www.nzsheep.co.nz/texel)).

All rams with Production Indexes and Breeding Values in the catalogue are bred by members of the New Zealand Texel Society Across-Flock Group (TAF).

All rams have passed veterinary inspection and on the day of examination were free from any visual or palpable defects which may affect genital soundness. All vendors' flocks currently hold brucellosis-free accreditation and the rams offered are confirmed non-carriers (NN) of the Microphthalmia gene.

## **Conditions of Sale**

This sale will be conducted under the usual conditions governing sales held under the auspices of the New Zealand Stock and Station Agents Association. Each lot will be the purchaser's responsibility as from the fall of the hammer.

### **Insurance**

Insurance of the ram is the exclusive responsibility of the purchaser.

### **Disclaimer**

The description, particulars and/or health status of the ram in each lot is believed to be correct, and no responsibility whatsoever is accepted by the Southern Texel Breeders Club or its members for any misdescription, and any error found herein shall not give rise to any claim for compensation or damages against the Southern Texel Breeders Club or its members.

### **General**

The minimum bid is \$500. A ram passed in the ring will not be available for sale on the day for less than \$600 or the vendor's reserve, whichever is the greater. Rams sold for \$1000 or more are eligible for Single Entry and transfer unless the vendor advises otherwise before selling commences. (This is subject to the ram meeting Texel Society requirements).

## Texel Across-Flock Performance Information

The rams' performance records presented in the catalogue are drawn from the NZ Texel Society's across-flock analysis (TAF) involving 46 flocks nationwide, 18 of which are represented at this sale.

Data from these genetically linked flocks is pooled and analysed using the SIL system. The TAF analysis and reporting is overseen and managed by The New Zealand Animal Breeding Trust.

The TAF indexes use SIL economic weightings to combine SIL breeding values (some of which are included here).

The indexes are expressed in cents. The higher the index the greater the estimated financial return from using the ram as a sire.

TSI = Terminal Sire Index = Meat Yield & Lamb Growth

DPI = Dual-Purpose Index = Meat Yield\* & Lamb Growth & Reproduction

\*not discounted for fat

The breeding values identify genetic merit for a single trait. They are expressed in their units of measurement.

WWT = weaning weight in kgs

LW8 = autumn hogget liveweight in kgs

EMA = eye muscle area adjusted for carcass weight in cm<sup>2</sup>

NLB = number of lambs born in lambs, or multiplied by 100 = lambing %

- All production indexes and breeding values presented are from the SIL TAF analysis 25846 10/12/12.
- Indexes and breeding values are comparable between animals.
- Rankings are within-flock (not across-flock).
- Each ram is ranked out of the number of ram lambs weaned.
