COUNCILLOR : Ms C. DRUMMOND
cristine.lindsay@xtra.co.nz

DORPER BREED STANDARDS

A well-balanced sheep with strong, deep, wide body and correct legs and feet.

Rams must be well muscled and strong from the front to the back.

Ewes must be lighter in front and getting bigger and heavier to the back. A ewe needs to look feminine - head, neck, etc.

Head

Strong and long with triangle shape. Eyes widely spaced, strong nose and strong mouth with well fitted jaw. Long ears are preferable. Heavy horns are undesirable. The head must be covered with short, dullish, black hair in the Dorper and dull, white hair in the White Dorper.

Neck

Medium length, well fleshed, broad and well coupled.

Shoulders and chest

Shoulders firm, broad and strong. Good muscling on the forearm. A moderate protrusion of the brisket with correct foreleg placement and moderate width between the legs. Shoulders, which appear loose, a brisket which protrudes too much or too little, are faults.

Barrel

Long, deep and wide body. The sheep must have a long, straight back and not a 'devil's grip'. A slight dip behind the shoulders is permissible.

Hindquarter

Long and wide rump. The inner and outer twist is to be well fleshed and deep.

Legs

Strong, well placed with strong pasterns and hooves not too widely split. The hocks must be strong without a tendency to turn in or out. X-legs, sickle or straight hocks are culling faults.

Reproductive organs

Scrotum of the ram should not be too long and the testicles of equal size and not too small. Well shaped udder and reproductive organs in ewe.

Cover

The ideal is a short, loose, light mixture of hair and wool and with a natural clean kemp underline in adult sheep.

Colour and pigmentation

Good colour and pigmentation.

■ **Dorpers:** A white sheep with black confined to the head and neck is the ideal. Black spots on the body to a limited extent are permissible but it is preferable that a body spot is joined to the neck colour. A blaze must not continue in front of the horn base on the head. An entirely white sheep or a sheep predominately black is not permissible. Brown hair around the eyes, white teats, white under the tail and white hoofs are undesirable.

■ **White Dorpers:** A white sheep, fully pigmented around the eyes, under the tail, on the udder and the teats is ideal. A limited number of other coloured spots is permissible on the ears and underline.

General appearance

The sheep should be symmetrical and well proportioned. A calm temperament with a vigorous appearance is the ideal.

Presentation of stock :

All stud sheep must be shorn less than 6 weeks or have a cover less than 1.5cm prior to being put in a public auction or competing in show classes at any A. & P. Assn Show.

□ **Stock Registration :**

For all stud sheep sold, either by public auction or private sale to a new breeder requiring transfer of registration, the stock must be inspected by a registered inspector **prior** to the said sale. All inspections must be carried out via the New Zealand Sheepbreeders Association (NZSBA). If no inspection sheet is held by the NZSBA for the animal the transfer will not be accepted and the animal will not be able to be registered by the new owner. An animal not sold through public auction or sold to an existing breeder can be registered and transferred without an inspection pass.

INSPECTIONS : The charges for inspecting Dorper sheep are \$20.00 for the 1st sheep and \$1.00 per sheep thereafter, plus any mileage at the standard rate.

Inspection of Dorper Rams & Ewes :- The inspection of Dorper rams and ewes is voluntary for private sales between registered breeders, but rams and ewes being sold at auction or to a new breeder require inspection. Between breeders either the vendor or purchaser can still require an inspection.

Appendix Flocks: - The grading up code be as follows –

D – ½ bred **C** – ¾ bred **B** – 7/8th

Basic ewe * stud ram = **D ½ bred**

D * stud ram = **C ¾ bred**

C * stud ram = **B 7/8th**

B * stud ram = **A 15/16th**

When upgraded ewes and rams are at the 4th cross (15/16 – 93.75%) they can be inspected for registration.

Graded-up rams in Appendix Flocks – a breeder may not use “graded up” rams in Appendix Flocks. Can only use pure (100%) rams.

Dermatosparaxis - this is an heritable condition in White Dorper sheep where the lamb receives both copies of this recessive gene from its parents. There is a test for this gene and those sheep tested and being non-carriers have the symbol (OD^{CL^R}) beside them.

FLOCK (OD^{CL^R}) - This occurs when all animals on the property have either been tested-clear (OD^{CL^R}), or are progeny from tested clear (OD^{CL^R}) parents.
