COUNCILLOR C. HAMPTON

On Wednesday 22nd August 2012 the Charollais Sheep Genetics NZ was formed.

The breed has agreed on the following –

That the breed has Appendix flocks. At the 7/8th stage ewes are eligible to enter the purebred flock and the resulting progeny are purebred. Rams require a further cross to be used in a Purebred flock and Appendix flock.

That all sheep entering a Purebred flock from an Appendix Flock be tested ‘clear’ of any genetic disorders that may be associated with that particular sheep breed.

That it be mandatory for all members to be on SIL.

That all members participate in the Across Flock Scheme.

That any ram(s) representing the breed in the CPT trial be chosen by the group.

That it be the role of the organization to give assistance to new breeders

That purebred Charollais rams and ewes for breeding should be tested for Microphthalmia.

That 7/8th ewes entering purebred flocks must be inspected by a Council Appointee.

From 2014 all sheep previously denoted with prefix Danengate will now be shown with the prefix Farmgene.

Breed Description

The Charollais is a terminal sire breed so emphasis on selection should be placed on its excellent fleshing qualities and growth. The purpose of the breed is to breed rams for crossing with commercial ewes to produce quality meat lambs for slaughter. Easy lambing is an important trait associated with the breed so skeletal structure to ensure this is essential.

Feet, legs, teeth, shoulders should be select to normal sheep breeding standards of excellence.

The Charollais is a wedged shape sheep the brisket should slope in line with the neck by not protruding lower.

Fleece should be down type with adequate staple length. A good birth coat is a necessity.

Fleece cover to at least the base of the ears.

Black spots and britchy wool should be discouraged

Head and legs should be free of wool, with a colour range from white to charcoal, bare skin on the face and ears should be discouraged. Bare skin around the anus and vulva is to be encouraged.

Feet pigmentation should be black or as dark as possible.
